

Concrete Testing Equipment

×

Standards:

Specification:

Concrete is a composite construction material made primarily from aggregate, cement, and water in order to obtain a robust stone like material. There are many formulations of concrete that provide various properties. Concrete is the most widely used man-made product in the world as the main building material. The quality of concrete is important in planning earthquake resistant structures that minimize damage, preventing injury and human loss. Due to this reason, concrete must be closely controlled according to the relevant standards in every stage of production by

experienced people using quality test equipment. Zeal International manufactures wide range of **Concrete Testing Equipment & Machines** including Compression Testing Machine, Concrete Cube Mould, Cylinder Mould and Curing Tank etc. Zeal also proposes a vast selection of NDT Instruments and apparatus with precise indications concerning the product use and the relative applications.
